LED based Suspension light

A retreat and rest

NEST

This nest shaped stainless steel suspension has mirror finished steel exterior, complimented with copper leafing inside. This LED based suspension gives a crisp shaft of down light while also providing ambient light. It is suitable for places like residences, hotels and corporate spaces.

Designer Vibhor Sogani's unique mantra exemplifies that lighting is not a fundamental requirement but also an art to beautify a space.

Vibhor is most materialistic about spaces – a good studio or an exhibition space. He says, "I need open layouts with a play of volumes that create different narratives and niches within one territory. I don't like to lock up my creations behind walls. I want them to be part of my everyday experience and thus, having a space that accommodates all of them is very crucial to me."
